AREA COMMENTS

BASEMENT: A thorough visual inspection was performed to the basement area. Pest monitors were inspected and replaced as needed. Pest monitors capture pests and inform us as to what pests are present in the area. Obtaining a positive identification of pests allows us to utilize products specifically designed to control that pest. Please ensure that items are not stored against walls. Items should be elevated 10-18 inches. This allows our technician to perform a more thorough inspection and permits access under stored items to place our pest management equipment. Details regarding conditions and treatments for this area will be noted on this service report.

EXTERIOR: The exterior of the structure was inspected for the presence of pest activity. Exterior treatments are performed at the discretion of the servicing technician. Any treatments and conditions regarding this area will be noted on this service report.

kitchen: A thorough visual inspection was performed to this area. Any pest activity observed will be noted on this report by the servicing technician. Monitors are in place to monitor for the presence of pest activity. Details regarding treatments or conditions will be noted on this service report.

OFFICE: The office area(s) was/were inspected for the presence of pest activity. Some areas may contain pest management equipment for monitoring for pests. Treatments
